

1980 COMMERCIAL VEGETABLE

Variety Trial Report - Peppers

Luther Waters, Jr.; David K. Wildung; Wesley H. Gray; James B. Hebel; Harvey J. Buchite; Bonnie L. Blanchette; Mark A. Bennett

Pepper variety trials were conducted in Minnesota at six locations during the 1980 growing season: Becker, Grand Rapids, Morris, Waseca, Anoka County Peat Site, and Excelsior (Horticulture Research Center). Bordered observational and replicated studies were conducted using the 66 varieties shown below. Plots consisted of single rows (30- or 36-inch row spacing) 15 feet long. Individual researchers were responsible for using cultural practices (weed, insect, and disease control and fertilization) to simulate standard commercial conditions in that location.

Ratings are judgments of individual researchers and should be used only to compare varieties within a location. Yields should be used only to compare varieties since commercial yields can be expected to be somewhat different.

TABLE HEADING INFORMATION

Maturity Date — date on which first mature fruits were harvested
WT/Plant — weight per plant in pounds

Fruit Shape — 1-6 shape rating (1 = globose, 2 = linear, 3 = conical clongate, 4 = conical blunt, 5 = oblate, 6 = blocky)

Fruit CLR — 1-9 color rating (1 = lt. green to 3 = dk. green, 4 = lt. yellow to 6 = dk. yellow, 7 = red, 8 = yellow-green, 9 = other)

Fruit Smoothness — 1 = smooth (lobes not prominent), 2 = rough (lobes prominent)

Fruit Uniformity — 1-3 rating (1 = uniform, 2 = medium, 3 = not uniform)

LOC No. — number of locules

Wall Thickness — thickness (in mm) of outer fruit wall

Plant HT — height of plant at maturity (cm)

Plant WD — width of plant at maturity (cm)

Overall Rating — 1-9 rating (1 = least desirable, 9 = most desirable)

For further information call:
